Replacement Instructions

CBTM1

Please ensure you have read the instructions and that no parts are missing prior to installation.

Please note

The approximate life of your filter is two years and will vary depending on several factors, i.e. manufacturers recommendation, amount of water being used through the filter, turbid water supply, amount of sediment in the water etc. If the flow through the filter decreases or water taste deteriorates it may be time to replace the filter.

How do you know when it’s time to replace your cartridge? We place your name in our records; this allows us to remember when you received your new cartridge. We will then remind you when it is time to replace it.

To change the AFRL to the DVLPL; pull on the white tubing to remove it from the AFRL fitting, if it is too tight you can loosen it in hot water

Step one
Keep kitchen tap turned off.

Step two
Hold base of benchtop unit firmly and unscrew base off old filter.

Step three
 Unscrew the spout off old filter.

Step four
Re-screw the new filter onto the base with flow direction arrow pointing upwards.

Step five
Then screw the spout on to the new filter.

Step six
Make sure everything is sealed correctly.

Step seven
Turn water supply on and run filter for approximately 5 minutes to activate the filter. Note: the water may flow black for the first few seconds. This is only carbon dust and will clear quickly. The water may have a milky look for the first few hours; this is due to millions of air bubbles being forced from the carbon.

Universal Rubber (AFRL)
To use your purifier, push the universal rubber connection onto your tap. Aim faucet spout of purifier into sink. Turn tap on slowly (too much pressure will blow the rubber off the tap) the purifier housing will fill with water, then start to flow from the spout. Continue to flush water through the filter for 3 to 5 minutes; which will activate the filter.

Diverter valve (DVLPL)
To install the diverter valve onto your tap, remove aerator from tap, screw diverter valve onto faucet. If the diverter does not fit, try the enclosed adaptor, between the faucet and diverter.
To use your water filter, turn your tap on, switch diverter on and follow instructions 2 to 5 above.
