
Replacement Instructions

Deluxe Tap

Please ensure you have read the instructions and that no parts are missing prior to installation.

Step one

Turn off water to the unit at the connecting valve.

Step two

Turn on the tap to check water is turned off; this also relieves the pressure from the lines.

Step three

Undo the Compression Nut; this removes the tubing from the end of the brass shaft.

Step four

Undo the locking nut from the base and remove, along with any washers/stabilisers.

Step five

You will now be able to lift the tap up and out of the hole on the bench top.

Step six

Replace tap into the hole in bench top with small rubber in place and refit the locking washer, stabiliser and locking nut.

Step seven

Place the insert in the tube end & slide the tube through the compression nut and olive.

Step eight

Insert the tube into the tap shaft with the olive flush with the base.

Step nine

Screw the compression nut onto the shaft and tighten.

Step ten

Turn water to unit back on via the connecting valve.
