## Mountain Fresh Shower Filters

Chlorine is a poisonous gas that damages your skin and hair. Hot shower water causes chlorine to vaporise, which you then breathe into your lungs. The result can be lung irritation, allergies, brittle, thinning hair and itchy, flaky skin.

These shower filters balance the water's pH. Additionally, KDF inhibits the growth of bacteria such as E-coli, mold and other impurities. As a result of bathing in purer, chlorine-free water, you may notice:

- Breathe easier because our shower filtration reduces harsh chlorine vapors, which are caused from the hot water and inhaled in the lungs and transferred into the blood stream.
- Reduction of allergy symptoms.
- Lessening of dry itchy skin and healthier looking skin.
- Luster and natural shine returning to your hair, leaving it silky and smooth. Great for colour-treated hair.
- Reduction of scale buildup and spotting due to softer, pH balanced water.

**Suitable for;** High pressure, mains supplied water only.

**Requires;** A Hose shower and high water pressure

Our shower filters use energy saver heads and patented Chlorgon® with KDF filtration media. Chlorgon, a non-carbon media, removes more chlorine at a wider temperature range than any other shower filtration media (not to be used for drinking water because of the taste).

**Which will remove;**

Free Chlorine (Cl)  
Combined Chlorine (Sodium Hypochlorite)  
Chlorinated Hydrocarbons and Vapours  
Hydrogen Sulfide (Rotten Egg Odour)  
Iron Oxide (Rust Water)  
Traces of Heavy Metals like Lead, Arsenic, Aluminium, Mercury and Cadmuim  
Dirt, Sediment and Other Odours
